### **CVA MUZZLELOADING SHOTGUN LOADING SLEEVE**

The enclosed Loading Sleeve is for use in CVA muzzleloading shotguns equipped with screw-in choke tubes.

The use of this Loading Sleeve will make the loading of your shotgun much easier and faster, and will prevent damage to the shotgun wads as a result of pushing the load through the threaded portion of the barrel.

To use this tool in loading your CVA muzzleloading shotgun, just follow these easy steps:

1. Make sure that the gun is unloaded and uncapped.
2. Remove the Screw-In Choke Tube by grasping the exposed, knurled portion of the tube and twisting it in a counter-clockwise direction (as viewed from the muzzle).
3. When the choke tube has been removed, place the Loading Sleeve into the muzzle.
4. Follow the loading procedures for muzzleloading shotguns as outlined in your CVA Break Action Warranty Information booklet (part number 103BAE).
5. Remove the Loading Sleeve.
6. Replace the Screw-In Choke.

#### **WARNINGS:**

- **Firing the gun with the Loading Sleeve in the muzzle can result in damage to the barrel and serious injury to the shooter or bystanders.**
- **Do not fire a shotgun that is threaded for Screw-In Choke Tubes without a choke tube installed, as to do so may cause damage to the barrel.**
